CAREER OBJECTIVE:

To begin my career as a Developer in Backend Development, utilizing my skills in backend development, API design, and database integration, and to grow through hands-on experience, problem-solving, and exposure to modern cloud technologies.

PROFILE SUMMARY:

- Good knowledge of Python and hands-on experience building small projects using **Python, Django, and FastAPI**.
- Basic understanding of **Django** for backend development and familiarity with **HTML, CSS, and JavaScript** for frontend tasks.
- Familiar with working with databases like **MySQL, PostgreSQL**, and NoSQL databases such as **DynamoDB**, and connecting them with Python applications.
- Exposure to **AWS services** like Lambda, S3 bucket, RDS, CloudWatch, and EC2 through academic projects and self-learning.
- Able to design and build simple **RESTful APIs** using frameworks like FastAPI.
- Knowledge of **unit testing** using pytest or unittest to ensure code quality.
- Understanding of **Agile development practices**.
- Hands-on experience using **Git, GitHub**, and Bitbucket for version control in projects.
- Basic understanding of Docker for containerizing applications and running lightweight development environments.
- Strong team player with good communication skills and the ability to collaborate and contribute effectively.
- Highly motivated, eager to learn, and quick to adapt to new technologies and tools.

TECHNICAL SKILLS:

- Programming Languages : Python
- Web Frameworks : Django
- API Development : Fast API
- Databases : SQL, MySQL, PostgreSQL.
- Testing Frameworks : unit test, pytest
- Version Control : GitHub, Bitbucket.
- AWS services : EC2, S3 bucket, RDS, Lambda, Cloud Watch.
- Project tools : Docker, GitHub Actions.
- Management Tool : JIRA
- Tools : Visual Studio Code, PyCharm, Postman.

TRAININGS & CERTIFICATIONS:

- [Google Cloud Computing Foundations & Generative AI](#) (2025).
- [ACM Winter School on Explainable AI, SRM University–AP](#) (Dec 2024).
- [CODE-A-THON Participant, GITAM University](#) (2024).
- [Internal Smart India Hackathon, GITAM University](#) (2023)

PROJECTS:

PROJECT #1:

Project Name: Sentiment Analysis using Machine Learning

Description:

Built a sentiment classification system to predict positive, negative, and neutral sentiments using NLP and machine learning techniques

Responsibilities:

- Preprocessed text using tokenization, stop-word removal, and TF-IDF.
- Trained and evaluated a Logistic Regression model for sentiment prediction.
- Implemented a streamlined ML pipeline for preprocessing and inference.
- Analyzed model performance and improved accuracy through tuning

Environment:

Python, Scikit-learn, Pandas, NumPy

PROJECT #2:

Project Name: Robust OCR for Skewed and Distorted Agro-Product Labels

Description:

Developed a multilingual OCR system using EAST for text detection and TrOCR for recognition, optimized for skewed, rotated, and low-light label images.

Responsibilities:

- Integrated EAST + TrOCR to build a complete OCR pipeline.
- Preprocessed distorted images to enhance text extraction.
- Trained the model on a 3,500-image COCO dataset across 6 languages.
- Achieved strong performance with an F1-score of 0.8

Environment:

Python, PyTorch, OpenCV, Transformers, Google Colab.

EDUCATION:

2022 - 2026

GITAM University, Bangalore.

Completed a Bachelor's in Computer Science Engineering with **88%** aggregate.

2021 – 2022

Jawahar Navodaya Vidyalaya-Kadapa.

Completed Intermediate (10+2) under the Central Board of Secondary Education (CBSE) with **72 %**.

2020

Sri Chaitanya High School.

SSC (10) from Board of Secondary Education Andhra Pradesh with **100 %**.

INTERESTS:

- Keep on learning and adapting to new technologies, especially in **Data Engineering and AI/ML** domains.
- Interested in exploring **Machine Learning concepts, data processing pipelines, and building scalable backend systems** using modern tools and frameworks.
